x 178 riages. Until the means for living respectably can be assured, 511 the families of Nea Eleftherohori are no longer willing to allow 582 their children to marry, nor do the children themselves wish it. In 1956, a young man who would inherit a farm of 27 strem- [583] mata expected his bride to bring with her a dowry of about 300 gold pounds. This is a truly extraordinary figure for any family in the village to raise, equal to $3,000 in American currency and considerably more in local purchasing power. Ten or fifteen years of strenuous saving are required to accumulate so much, all the more since appearances have to be maintained in [589] the meantime, and this takes money too. Consequently, a good many men and women in their thirties and some in their early forties remain unmarried.

x 178 Once again, a partial exception must be made for the refu- 582 gees, among whom the dowry system is not so universal and 583 binding as among the old settlers, and who still sometimes [563] marry young and before the new family has any assured means [626] of support. But the dowry system is said to be spreading among them too; and the disdain (mingled perhaps with a certain envy) with which the old settlers speak of the refugees' irresponsible marriages makes it clear that the strongest sort of social pressure is at work to prevent such occurrences.

• [168] Apparently the people of Nea Eleftherohori are making use of an old custom, the dowry, to regulate population growth. Quite consciously and deliberately, they seek to keep their numbers within the limits imposed by their economic position; or, to put it the other way around, the villagers are determined not to sink into poverty, or to allow their children to do so; and by postponing marriages they know they can avoid the disaster of having too many mouths to feed.

163 The birth records of the village show what has been accom- 168 plished in this direction. Before 1939 the number of births 621 annually recorded never sank below 42, and went as high as 77

in 1933. Since the war the number of recorded births has never exceeded 19, and sank as low as 11 in 1953. Deaths have declined also, but not as sharply, so that the natural increase of the village population in the early 1950's ranged from 6 to 12 persons a year instead of the 30 to 40 a year of the early 1930's. This decrease is the more striking since the total population of the village grew from something like 450 at the time the basic distribution of land was made in 1927 to 875 in 1956.

Two defects are obvious in the adjustment which the people of Nea Eleftherohori are making to their straitened circumstances. In the first place, there is no certainty that the boys pursuing a secondary school education will be able to find jobs when their training is completed. In 1956, there were three or four graduates of the gymnasium living in the village, waiting for something to turn up. One of them was working as a laborer on a road gang – a fate considered a terrible indignity to an educated man, even by his peasant relatives. But I was told that so far, "sooner or later," everyone who had finished the gymnasium course had been able to get a job in town, usually in the government civil service; and the parents who were sending their boys to school seemed to have no serious doubts that in due course their sons, too, might find a government desk to sit behind. If their hopes should be betrayed, then of course the whole campaign for maintaining family standards of living will be in danger of breaking down. Bitter disillusionment and discontent may then gain ground, especially among the educated young men. This is a real danger, for even a civil service as capacious as that of Greece cannot absorb indefinitely the gymnasium graduates of many villages like Nea Eleftherohori; and, of course, the gymnasium training does not prepare the boys for anything but white-collar work.

The second defect is psychological. Long postponement of marriage through the dowry represents a drastic alteration

The Greeks have a story that when God made the world he put the earth through a sieve and used the soil to make the different countries; but the stones that were left in the sieve he threw over his shoulder, and they became Greece.[1] The land is so mountainous, precipitous and stony that out of the 50,100 square miles that constitute the area of Greece, only 25 per cent are usable as fields, orchards and pastures.[2] Yet on this land, out of a population of 7,335,675, according to 1940 figures, 60 per cent are directly engaged in agriculture, and another 15 per cent cater to the needs of the farmers.[3] This condition, as well as a growing population, is basic to the need for technical change in Greece. Through more than 2,500 years, Greece solved the problem of increasing population on limited land by sending out her people as colonists or immigrants. In the first two decades of this century, emigration to the United States provided the main solution. Early in the 1920s' two things took place which combined to make the population problem acute; the United States passed a law under which a quota was applied to immigrants, which limited drastically the number of Greeks who could thereafter enter the country; and the exchange of populations with Turkey, which increased the population of Greece suddenly by more than a fourth. Since then, the population figures from 1928 to 1940 indicate an annual increase of 1.5 per cent.[4] The traditional ways of farming and the traditional crops cannot support this growing population, even in terms of sheer subsistence. Change must be introduced at the very roots of the economy, striking at the relationship of man to the land and of man to his work, which is a close and meaningful one to the Greeks. How to do this without destroying the meaning of life is the question facing those entrusted with the introduction of change into this culture.

We give here a report of the basic structure, tenets, and attitudes of Greek culture which should be considered in applying change.

Greece has been undergoing induced change for several decades now. Before 1920, the centralization of political and civil affairs effected profound and permeating change in village communities which had been used to self-regulation, and where a prominent farmer spent his entire fortune to build a village school, or a schoolteacher, on hearing of the appearance of the enemy in the vicinity, could, on his own initiative, pass out arms and lead his pupils to battle. After the exchange of populations with Turkey in 1922, the Near East Foundation, helping to rehabilitate the refugees, also undertook to introduce changes in sanitation, child care and the standard of living generally. Changes in the areas of agriculture and health were
